

OpenAir™

Air damper actuators

GMA...1

Rotary version with spring return, AC 24 V / AC 230 V

Electronic motor driven actuators for two-position, three-position, and modulating control, nominal torque 7 Nm, with spring return, self-centering shaft adapter, mechanically adjustable span between 0...90°, prewired with 0.9 m long connection cables.

Type-specific variations with adjustable offset and span for the positioning signal, position indicator, feedback potentiometer, self-adaptation of the rotary angle range, and adjustable auxiliary switches for supplementary functions.

Remarks

This data sheet provides a brief overview of these actuators. Please refer to the technical basics in CM2Z4614en for a detailed description as well as information on safety, engineering notes, mounting and commissioning.

Use

-
- For damper areas up to 1.5 m², friction-dependent.
 - In ventilation sections where the actuator must move to the zero position (emergency position) during power failure.
 - For dampers having two actuators on the same damper shaft (tandem-mounted actuators or Powerpack).

Type summary

Functions

Type	GMA12..1 / GMA32..1	GMA13..1	GMA16..1 / GMA19..1
Control type	Two-position control	Three-position control	Modulating control
Positioning signal with adjustable characteristic function			DC 0...35 V at Offset $U_o = 0...5 V$ Span $\Delta U = 2...30 V$
Rotary direction	Clockwise or counter-clockwise movement depends on the mounting position of the damper shaft... ...and on the type of control.		For GMA19..1 only: ...and on the DIL switch setting that is either clockwise or counter-clockwise.
Spring return	On power failure or when the operating voltage is switched off, the spring return moves the actuator to its mechanical zero position.		
Position indication: Mechanical	Rotary angle position indication by using a position indicator.		
Position indication: Electrical	The feedback potentiometer can be connected to external voltage to indicate the position.	Output voltage $U = DC 0...10 V$ is generated proportional to the rotary angle. For GMA19..1 only: U depends on the rotary direction of the DIL switch setting.	
Auxiliary switch	The switching points for auxiliary switches A and B can be set independent of each other in increments of 5° within 5° to 90°.		
Self-adaptation of rotary angle range			For GMA19..1 only: When self-adaptation is active, the actuator automatically determines the mechanical end positions of the rotary angle range and maps the characteristic function ($U_o, \Delta U$) to the calculated rotary angle range.
Powerpack (two actuators, tandem-mounted)	Mounting two of the same actuator types on the same damper shaft may result in a double torque.		Only for GMA19..1: Parallel operation of the actuators by master/slave control.
Rotary angle limitation	The rotational angle of the shaft adapter can be limited mechanically at increments of 5°.		

Ordering

Note

Potentiometer and auxiliary switches **cannot be added in the field**. For this reason, order the type that includes the required options.

Delivery	Individual parts such as position indicator and other mounting materials for the actuator are not mounted on delivery.	
Accessories, spare parts	Accessories to functionally extend the actuators are available, e.g., linear/rotary sets and weather protection cover; see data sheet N4697 .
